The following comparison between the receipts, expenditures, applications filed, issues of the Office, the printed copies sold, copies of records furnished, and the number of employees for the years ended, respectively, December 31, 1899, and December 31, 1910, illustrates the growth of the business of the Patent Office:

Class.	1899	1910	Increase.	Percentage of increase.
Receipts	$1,325,457.03	$2,025,536.69	$700,079.66	52.8

In 1910 there were received 63,293 applications for mechanical patents, 1,155 applications for design patents, 181 applications for reissues of patents, 6,843 applications for registration of trade-marks, 755 applications for registration of labels, and 226 applications for registration of prints. There were 35,807 patents issued, including designs; 123 patents reissued; and 4,239 trade-marks, 370 labels, and 120 prints registered. The number of patents that expired was 22,768. The number of allowed applications, awaiting the payment of final fees, was 11,336; and the number forfeited for nonpayment of the final fees, 7,442. The total receipts were $2,025,536.69; the expenditures, $2,005,711.94, and the surplus of receipts over expenditures, $19,824.75. The total balance to the credit of the Patent Office in the Treasury of the United States on December 31, 1910, was $6,998,227.64.

In proportion to population more patents were issued to citizens of Connecticut than to those of any other State—1 to every 1,126. Next in order are the following: District of Columbia, 1 to every 1,329; California, 1 to every 1,616; Massachusetts, 1 to every 1,623; New Jersey, 1 to every 1,727; Colorado, 1 to every 1,765; Illinois, 1 to every 1,782; New York, 1 to every 1,841; Ohio, 1 to every 1,926; Rhode Island, 1 to every 1,951; Nevada, 1 to every 1,992; Pennsylvania, 1 to every 2,242; Washington, 1 to every 2,719; Wisconsin, 1 to every 2,805; Michigan, 1 to every 2,891; Missouri, 1 to every 3,002; Utah, 1 to every 3,010; Oregon, 1 to every 3,071; Idaho, 1 to every 3,100; North Dakota, 1 to every 3,153; Indiana, 1 to every 3,326; New Hampshire, 1 to every 3,417; Minnesota, 1 to every 3,443; Nebraska, 1 to every 3,455; Iowa, 1 to every 3,685; Kansas, 1 to every 3,708; Montana, 1 to every 3,917; Vermont, 1 to every 3,999; Arizona, 1 to every 4,170; Maryland, 1 to every 4,247; Wyoming, 1 to every 4,293; South Dakota, 1 to every 4,325; Alaska, 1 to every 4,596; Delaware, 1 to every 4,705; Maine, 1 to every 4,981; Texas, 1 to every 5,800; West Virginia, 1 to every 5,814; Oklahoma, 1 to every 6,373; Florida, 1 to every 6,601; New Mexico, 1 to every 6,679; Virginia, 1 to every 8,548; Kentucky, 1 to every 8,576; Tennessee, 1 to every 8,809; Louisiana, 1 to every 9,151. The fewest patents granted in proportion to the number of inhabitants were in the following States and Territory: South Carolina, 1 to every 17,620; Mississippi, 1 to every 14,975; Hawaii, 1 to every 13,707; Georgia, 1 to every 12,192; North Carolina, 1 to every 12,056; Alabama, 1 to every 11,812; and Arkansas, 1 to every 11,662.

As to foreign patents, 1,083 were granted to citizens of Germany; 894 to those of England; 534 to those of Canada; 315 to those of France; 139 to those of Austria-Hungary; 124 to those of Sweden; 77 to those of Switzerland; 67 to those of Scotland; 66 to those of Victoria; 61 to those of Belgium; 47 each to those of Italy and Russia; 35 to those of Norway; 31 to those of Mexico; 30 to those of New Zealand; 28 each to those of Denmark and Transvaal; 23 to those of New South Wales; 18 to those of the Netherlands; 12 to those of Ireland; 9 each to those of Cuba and Spain; 8 each to those of Argentina and Japan; 5 to those of Natal; 3 each to those of Brazil, Colombia, Guatemala, India, Java, Luxemburg, Roumania, and West Australia; 2 each to those of British West Indies, Cape Colony, Costa Rica, Egypt, Ecuador, Newfoundland, Orange River Colony, Queensland, South Australia and Turkey; and 1 each to those of Chile, China, Isle of Man, Peru, Portugal, St. Lucia (West Indies), Tasmania, Uruguay, and Venezuela.

THE PRESENT CONDITIONS IN THE PATENT OFFICE.

The work of the examining corps has vastly improved during the last year. The searches have been more thorough and greater care has been exercised in every way by the examining force, with the result that this branch of the work is in much better condition than ever before in the history of the Office. This result has been reached and made possible by the increase in force and salaries which has been granted by the Congress in the past three years.

Previous to this period the salaries of the examiners had not been increased since 1848, or for a period of sixty years, which necessarily resulted in the loss, by resignation, of a large percentage each year of these highly educated and experienced men. At the present time, since the increase of salaries, the Commissioner has been able to retain a much larger percentage of these technically trained employees. The larger salaries have appealed also to graduates of the various universities and especially such men as have specialized in the scientific and technical branches, so that to-day the examining corps has been recruited up to its normal condition from this class of very desirable men. Since the salaries were increased, the standard of the entrance examination was raised to include more advanced questions in the subjects of mathhematics, technics, physics, chemistry, both organic and inorganic, reading and describing mechanical drawings in technical

terms, French and German; so that it can be safely asserted that the examining corps of the United States Patent Office is to-day fully the equal, if not the superior, of any like body of men in the world.

The conditions surrounding the registration of trade-marks are not as satisfactory. The trade-mark branch of the Office is quite distinctive from the regular technical work and has no special relation to the rest of the work of the Office. However, that branch of the Office has been kept up with great effort on the part of the present administration, although it has been found necessary to ask Congress through the appropriation bills to provide a force of assistant examiners of trade-marks and designs. When these are provided, it will be possible to put this branch of the work on the same high footing now attained by the regular examining corps.

In this connection permit me to say that I think it quite necessary that in view of the great importance trade-marks are to manufacturers and to commerce generally, this part of the work should be more carefully done, and by trained men. The subject of trade-marks has received a great deal of attention in this as well as foreign countries in the last year or two, and it will soon be the subject of discussion at the forthcoming Congress of the Union for the Protection of Industrial Property which convenes in Washington in May of this year. I am very clearly of the opinion that after the conference referred to has met and considered the question of trade-marks from an international standpoint, it will be quite necessary to pass a new trade-mark law. This law should be, in my opinion, very liberal and unmistakable as to provisions.

I have other important changes in the patent laws under consideration and after consulting with the Inventors' Guild, an association of the most noted inventors of the country, I intend to submit recommendations to the next Congress. I do not embrace them specifically in this report for the reason that there will not be sufficient time remaining during the closing days of the Sixty-first Congress to justify my asking you to give the necessary attention to these very important amendments suggested to the patent laws. I will also be able to utilize the time between the closing of the present Congress and the convening of the next Congress, in taking advantage of the discussions and the measures adopted by the International Congress of the Union for the Protection of Industrial Property, which will pass upon and discuss the laws of all nations relating to industrial property, more especially patent and trade-mark laws.

CLASSIFICATION OF PATENTS.

The great volume of American patents already issued numbering nearly one million, and also between two and three millions of foreign patents and about fifty thousand volumes of scientific and technical works in the library of this Bureau, should be classified and digested as soon as possible. When this subject was brought to the attention of the Committees on Appropriations of the House and the Senate, I am pleased to state that it was received with much interest and favorably discussed. The Office was given an examiner of classifications on an increased salary, and there was also provided a force of twenty assistants examiners for this special work. The classification of the United States patents is now being made, and at the present time about half of these patents have been classified.

In my opinion it would be in the interest of great economy if this force were doubled, so that this very important work could be completed at the earliest possible date. No classification in this Office has been made since its foundation, or since the first patent was issued in 1790.

The business of the Office is so enormous at the present time that it is almost impossible for the examining force to work with any great degree of certainty in making searches during the examination of applications for patents. It will also give enormous benefit to the inventors and manufacturers of the country and to the outside public generally to have this great mass of material in as perfect form for use as it is possible to make it. With this work carefully done it would not be necessary for the Commissioner of Patents to ask for an increase of force every year, as the work of examination of the applications of inventors would be very much simplified, and such patents as are granted would have a much greater degree of validity attached to them than is possible without these facilities for thorough search.

ELIMINATION OF APPEALS IN THE PATENT OFFICE.

I desire again to invite the attention of the Congress to the urgent necessity for relief in the matter of appeals in this Office. As I have recommended in former reports I desire again to urge upon the Congress the great necessity for eliminating one of the appeals of the Patent Office. This is entirely in the interest of the inventor, who is now delayed frequently from one to two years by taking an appeal to the Board of Examiners-in-Chief, which, in my opinion, is entirely unnecessary. If the three members of the present board, together with the Commissioner, the First Assistant Commissioner, and the Assistant Commissioner, were formed into one tribunal, and appeals should lie direct to this proposed new appellate court, it would result in a great saving of time and money to the inventors of the country.

A bill making these changes was passed by the Senate in the last Congress and a favorable report was made by the Committee on Patents of the House in the present Congress. It is to be hoped that this measure will be enacted into statute as soon as practicable. This recommendation has the approval of the Secretary of the Interior, who referred to it in his report to the President in the following language:

> In respect to needed legislation pertaining to patent matters, I refer to and indorse the suggestions of the Commissioner of Patents in his annual report for the year ending June 30, 1909, directing particular attention to the recommendation for the enactment of a law which would eliminate one appeal in the Patent Office, and thus diminish materially the expense and time now required in obtaining a final adjudication.

It also had the approval of the President of the United States, who is very much interested in lessening the expense of litigation, and simplifying the proceedings of the courts as far as possible, as he has frequently announced in his public speeches and in his ast message to Congress.

The following statement gives the appeals in the Patent Office for the calendar year just closed, and also the appeals to the Court of Appeals of the District of Columbia:

REPEAL OF CAVEAT LAW.

I am pleased to state that the Congress adopted my recommendation for the repeal of the caveat law. Although it had been in existence for some time it was considered wholly inadequate to protect in any way the inventors, and the workings under the same were very expensive to them also. Although this lessened the receipts of the Office by $20,000 a year, that fact should not be taken into consideration when so much good was done by the repeal of this law.

RIGHT OF APPEAL TO COURT OF CLAIMS.

It is very gratifying to the inventors of the country that Congress has enacted a law permitting them to file suits in the United States Court of Claims to recover payment for their inventions where such inventions have been appropriated by the Government. Heretofore the inventor, in such cases, had no redress whatever, and the United States and Russia were the only two Governments who did not adequately pay the inventors for such patented devices as they saw fit to use. This has failed to encourage inventions whose sale was only possible to Governments, as in the case of ordnance, warship building, mail devices, and inventions of all kinds relating to the general protection of the Government in every conceivable way. Of course, so long as these things were appropriated by the Government without remuneration, it had the effect of discouraging invention in these lines. In a great many cases inventors were driven to sell their meritorious inventions to foreign nations.

The bill for their relief was first passed during the last few days of the Sixtieth Congress, but the President withheld his approval. It was reintroduced in the present Congress at its first session, was passed and was signed by President Taft, and is now a law. This measure has conferred an immense amount of good upon the inventor and has had the effect of stimulating valuable inventions which the Government is constantly needing and using in many of its branches of work. I had the great honor of bringing this matter before the Patent Committees of Congress, both orally and in writing.

TREATIES WITH FOREIGN NATIONS RELATING TO INDUSTRIAL PROPERTY.

Several treaties have been entered into with foreign countries and the laws of several countries have been changed in regard to the so-called working clause.

Previously, if an invention of an American citizen was patented in this country and also abroad, and this invention were not worked abroad, the products could not be sold in these countries, if they were manufactured solely in the United States. The United States law does not embrace any such provision and never has. When that fact was brought to the attention of many nations, they took it under serious consideration, with the result that now in many of these countries it is not necessary for an American manufacturer to duplicate his plant in all other countries in which he wishes to sell his goods.

A notable case is the treaty with Germany which the Department of State sent me abroad to negotiate, and with which success crowned the efforts made. A treaty was entered into with the German Empire, which, in its broad workings, had the effect of not only protecting the American inventor, but the German inventor as well. That treaty has been construed by the imperial court sitting at Leipzig, and its provisions were upheld in some of the patents which had been declared forfeited, and they were ordered to be restored by the German Patent Office. That treaty is still in force. Treaties with other countries, of a like import, are now pending.

THE FOURTH INTERNATIONAL CONFERENCE OF AMERICAN STATES.

The Fourth International Conference of American States, which convened in the city of Buenos Aires, Argentina, on July 9 and continued until August 30, 1910, passed upon three conventions relating to patents, trade-marks, and copyrights, which were prepared by the Commissioner of Patents and who was in attendance on that congress by commission of the President of the United States, as "expert attaché." These three subjects were thoroughly discussed in committee by that congress and also upon the floor, with the result that after eight weeks of most thorough consideration, all three of said conventions were adopted by the 21 States comprising that congress. These conventions are now awaiting ratification by the respective Governments represented at that conference. When these three conventions shall have been ratified they will result in great benefit to all the nations belonging to the Pan-American Union.

One of the provisions of the trade-mark convention which was adopted, if it is permissible to state it here, is that it protects the Red Cross and the Geneva Cross insignias from improper use in all these countries.

INTERNATIONAL CONGRESS OF THE UNION FOR THE PROTECTION OF INDUSTRIAL PROPERTY.

The nations of the world, those who are adherents to the treaty of Paris of 1883, as well as all others, have been invited by the United States to hold the next congress of the union in the city of Washington, beginning May 15, 1911.

An appropriation of $10,000 was made by the Six-

tieth Congress to defray the expenses of this gathering, which was originally expected to meet in May, 1910. By communication with the international bureau at Berne, Switzerland, it was learned that there would not be sufficient time for the various nations participating—some 35 in number—to prepare material to be considered by the conference, and upon the recommendation of the Commissioner of Patents the date was changed to May, 1911. Congress, under request of the State Department, continued the appropriation. Since that appropriation was made, however, this Government has invited the 20 Pan American States to send representatives to this congress, and a great many have accepted, and the probability is that all of them will signify before the date of meeting, their intention to send delegates. This congress will be composed of members representing the various foreign nations, whose credentials will empower them to sign any measure that shall be passed by said congress, subject, however, to the subsequent approval of their respective Governments. The meeting of this congress will probably be the most important in the history of the union. Able and experienced delegates, mostly officials of the various nations, will be appointed, who will discuss and act upon measures to bring about international concessions and agreements in patent and trade-mark laws, thereby harmonizing the laws of various countries, which laws are at the present time widely at variance, so much so, in fact, that it is almost impossible for inventors and manufacturers to do business with any degree of satisfaction in the various countries.

By reason of the invitation extended to the Pan-American countries, which was extended subsequent to the appropriation of $10,000 for the expenses of the conference and entertainment of its members, Congress has been asked to appropriate an additional sum of $15,000, as the delegates will be more than doubled in number by reason of said later invitation. The first sum appropriated is not adequate to pay the expenses of this congress.

The President of the United States has, through the Secretary of State, appointed as delegates to represent the United States at this congress, the Commissioner of Patents, Hon. Edward B. Moore, chairman of the delegation; Hon. Charles H. Duell, former Commissioner of Patents, and ex-justice of the Court of Appeals of the District of Columbia; Frederick P. Fish, Esq., of Boston; Melville Church, Esq., of Washington, D. C.; and Robert H. Parkinson, Esq., of Chicago, Ill., all of whom are leaders of the patent bar and well-known authorities in patent law and practice.

COURT OF PATENT APPEALS.

The efforts of the American Bar Association to establish a court of patent appeals meets with my heartiest approval. Legislation to accomplish this end should, in my opinion, become law at the earliest practical moment. A patent is granted by the Government which is effective throughout the United States and Territories. When this patent, however, is involved in a suit which is brought in any judicial district, the final decision, on appeal, is rendered by the circuit court of appeals of that jurisdiction. A decision involving the construction of a patent by the circuit court of appeals of one jurisdiction is effective only for that jurisdiction and has no legal effect in any other of the several circuits, except through comity. There have been in the past decisions rendered by several circuit courts of appeals which are directly opposed to each other. In view of the fact that a patent, when issued, is effective in all the States and Territories it is very clear that there should be one court of patent appeals whose decisions will control the status of that patent throughout the entire country. The importance of this is evident when it is considered that there are nine circuit courts of appeals and one Court of Appeals of the District of Columbia, and each of which may and often does entertain in some particular a different view from the others with regard to the same patent.

At the request of the Committee on the Judiciary of the Senate I had the honor to advocate recently the speedy passage of the bill creating this court.

IMMEDIATE NECESSITY FOR ADDITIONAL SPACE.

I desire again to invite the attention of the Congress to the great need of a new and more commodious building to house the Patent Office. The present quarters provided are wholly inadequate. The volume of business of the Bureau increases each year, as will be clearly shown by the table embraced in the report giving the increases since the law of 1836 was passed.

I wish to express my appreciation of the assistance given me by Secretary Ballinger in my endeavors looking to the betterment of conditions in this Bureau.

Realizing the necessity existing for more working space in the Patent Office, the Secretary has, at the expense of crowding his own immediate force, made available all possible space in the building, and turned it over to the Patent Office. He even offered to vacate that portion of the building occupied by his own office, but I assured him that this sacrifice would not be necessary. At the same time, there is urgent need for newer and better quarters in which to carry on the work of this important branch of the Government.

The Patent Office has been more than self-supporting since its creation. The inventors pay for its maintenance, and not a dollar comes from the general tax revenues of the country. The surplus of receipts over expenditures each year is absolutely a net surplus, after deducting salaries and every item of expense that is charged to the Bureau.

The net surplus of all years covered into the Treasury on December 31, 1910, is $6,998,227.64. Your attention is invited to the table in this report showing the volume of business and the net surplus from 1836 to 1910, inclusive.

It is strongly urged that this sum, or so much thereof as may be necessary, be used for providing a new building in which ample room will be afforded to properly and promptly transact the business of the inventors, for which they more than pay the total cost.

The sum represents the net earnings of the Patent Office, and it is due to the inventors of this country that the money should be utilized for the purposes of providing suitable facilities for expediting the work of the Patent Office. It is necessary that patents for new inventions should be issued with the utmost

promptness after the application for patent has been filed, for such inventions form the basis of vast industries, which inure not merely to the profit of the inventor but to the benefit of the manufacturer, the laborer, the trader, the professional man, and the consumer, and to the commercial interests of the country in general.

Great Britain and Germany have each recognized the necessity for providing ample facilities for the work of their patent offices and have each recently erected new buildings for their patent offices which are in every way more commodious and better adapted to the business of a patent office than the building which now houses the United States Patent Office, although the patent business of either of those countries is but a small fraction compared with that transacted in the United States Patent Office.

If I may be permitted, I would suggest the passage at this session of the bill introduced by the late Senator Daniel on April 15, 1909 (S. 1629). The structure and location meet my full approval.

Respectfully submitted.

EDWARD B. MOORE,
Commissioner of Patents.
